

CARE AND MAINTENANCE OF PROPLEX

Manufacturing Process

ProPlex by Pinseeker is a Recycled Polymer than will outperform most materials.

It can be cut, machined and drilled using the same manufacturing methods we use on our hardwood furnishings. The two tone colour options are an excellent outdoor solution that will give many years service with the least amount of maintenance required, however, as with all outdoor signage a small degree of maintenance is needed to keep these products looking their very best.

Procedure

We recommend that two or three times a year the frames and plaques (where applicable) are cleaned with a non-abrasive cleaning agent, soap and water with a soft brush or rag will suffice.

Graffiti

An Anti-Graffiti protection can be applied to the printed display panels at the manufacturing stage. However generally it is rarely requested due to the additional costs involved.

Vandalism

Scratches and gouges to the ProPlex material are not repairable but due to the uniform through colour they are often not noticeable. If the printed panel itself was to get damaged the best course of action is to call Pinseeker who will supply a new printed panel.

Indemnity

Pinseeker UK Ltd cannot be held responsible whatsoever for any damage caused to the posts by outside influences such as fertiliser, Chemicals, vandalism, or a lack of maintenance.

**Dangerous
substances**

Warning: Since some fertilisers do have harmful ingredients it is wise for ALL ProPlex products to be wiped clean after any application of fertilisers onto the course.

Warning: It is essential that any bird droppings are removed from the signs as quickly as is practically possible, as at certain times of the year they can be very acidic causing damage surface damage.
