

# CARE AND MAINTENANCE OF BRONZE PLAQUES

## **Preservation of your Bronze Plaques**

Natural Bronze will verdigris naturally through time. The verdigris is a natural coating which forms on the surface of the plaque and can be removed with a wire brush.

Once the bronze has been wire brushed, rub the surface with wet & dry sandpaper. To complete the process, treat the raised areas with a metal polish (Brass or similar) and furniture wax (or equivalent) on the recessed background areas.

The alternative is to send the plaques back to our factory and we will clean and re-lacquer. The cost of this is £45 each plus pickup and re-delivery.

## **Indemnity**

Pinseeker UK Ltd cannot be held responsible whatsoever for any damage caused to the posts by outside influences such as fertiliser, chemicals, vandalism, or a lack of maintenance.

## **Limitations**

Localized ground & climate conditions can vary greatly and must be considered by the installer for the effects on bronze products. This information is for general guidance only and all installations are the direct responsibility of the club or installer.

No responsibility or liability can be accepted by Pinseeker (UK) Ltd.

**Dangerous  
substances**

**Warning:** It is essential that ALL bronze plaques be cleaned after any application of fertilisers onto the course. Nitrogen fertiliser can burn through the protective coating in a matter of hours.

**Warning:** It is essential that any bird droppings are removed from the signs as quickly as is practically possible, at certain times of the year they can be very acidic causing surface damage.
